No part of the report may be copied, stored in an electronic data retrieval system, or transmitted to third parties unless expressly authorized by Energy Futures, Inc.

Editorial Statement

THE CLEAN FUELS AND ELECTRIC VEHICLES REPORT was founded with the proposition that improvements to the conventional fuels and the development of advanced technologies are necessary to solve urban air pollution and energy security problems and to ensure vibrant economic development in the transportation sector. We are dedicated to improving communications in the complex and expanding field of advanced propulsion systems and the new fuels that power them. **THE CLEAN FUELS AND ELECTRIC VEHICLES REPORT** takes no position of advocacy for any specific fuel or technology. We believe that each fuel and technology candidate should be subjected to thorough technical, economic and environmental comparison with all other candidates.
