

OPIS helps banks, lenders and other investors predict the performance and verify the financial health of downstream energy companies.

## Goals

Gain price transparency into oil and related products to make informed, timely recommendations on company performance.

Obtain reliable price, margin and sales volume data to make strategic retail fuel investments.

Access unbiased pricing data to clarify relationships between crude oil and related petroleum products.

## Challenges

Making stock recommendations on energy companies ahead of company earnings calls.

Evaluating investments in retail fuel companies looking to expand into markets with tight margins.

Tracking the highly volatile energy market and identifying synergies between crude oil and related product prices that inform company strategies.

## OPIS Solutions

30+ years of price data shows how crude oil performance relates to key benchmarks, such as gasoline, diesel, LPG and renewables.

Daily price reports and real-time tools keep investors up-to-date; news and price analysis put market fluctuations in context.

Forward market intelligence helps define the shape of price dynamics

Historical and real-time gasoline and diesel prices and margins for more than 300 brands at 130,000 U.S. gas stations provides a robust picture of the retail landscape.

Regional retail demand information tracks fuel volumes sold at stations, allowing investment companies to benchmark throughputs and gauge true consumption.
