Spot

Market Challenge

In the Asia-Pacific region, credible information on light distillate and condensate fuels is hard to gather in a format that helps buyers and sellers make decisions. Spot pricing assessments are available, but are scattered among separate reports that are costly to obtain and don't provide industry news as context.

How We Help

The OPIS Asia Naphtha & LPG Report combines regional news analysis with spot pricing for the connected markets of naphtha, LPG, gasoline and condensate. In a single daily report, via email or FTP, you get a clear explanation of benchmark price assessments. Not only is this intelligence more affordable than other resources, it's also easy to access for integration into preferred trading platforms as a benchmark reference.

Benefits

- Charts and graphs reveal price trends at a glance
- Spot differentials show key product relationships
- Spot gasoline prices and differentials measure the value between refined products
- Outright FOB Arab Gulf spot prices for propane and butane extend your view of the market
- Three-month forward pricing for CFR Japan naphtha swaps highlight the near-term curve
- FOB Singapore spot differential calculations (92 RON) predict changing price dynamics
- News reports on refinery disturbances, tender and shipping allow for faster reaction to market changes
