OPIS Mexico Racks

Gain transparency into implied wholesale fuel prices at terminals in Mexico for profitable transactions amid deregulation

OPIS pioneered rack price discovery in the U.S., establishing benchmarks widely used by suppliers. We now bring the same visibility at a critical time to Mexico.

Features

— Prices available in both Dollars/Gallon and Pesos/Liter
— Sort and filter by state, municipality and terminal
— Three days of price history
— Toggle between English/Spanish
— Rack pricing for six U.S. border cities:
  Brownsville, El Paso and Laredo in Texas; Imperial and San Diego in California; and Tucson in Arizona

Market Challenge

The Mexican government is implementing significant energy reforms – the first in more than 80 years – to liberalize fuel markets and spur investment in production and infrastructure. Reform will bring open market pricing within the next two years as private industry enters the supply chain and PEMEX relinquishes price controls in 2018.

How We Help

In the new open market, fuel buyers and sellers can now depend on OPIS for unbiased pricing information to negotiate contracts and make critical import/export decisions. OPIS calculates an implied wholesale price daily at Mexico’s terminals using both retail and spot values in the formulas detailed at right.

Methodology

— Retail - Methodology = OPIS Retail averages, adjusted for margin, freight, VAT and IEPS taxes.
— Spot + Methodology = Gulf Coast Waterborne spot numbers, adjusted for storage, pipeline, additive and other transportation costs.
