The Energy Daily

Cut to the chase on the most important news in the U.S. energy industry from a decision-maker’s perspective

The Energy Daily by IHS Markit provides timely updates and informed analysis on key policy, regulatory, environmental and technology developments across multiple sectors.

More Insight, Faster
There are many news outlets covering happenings in the U.S. energy industry, but often in a superficial way without an executive-level focus or the vital context needed to fully understand key developments. These sources also require busy executives to waste time burrowing into balky websites to discover what matters most, and do not have experienced journalists capable of detecting and explaining important trends—and what they mean for policymakers and companies in the increasingly complex and competitive energy marketplace.

Benefits
— Receive time-sensitive updates on high-profile developments in a concise format
— Access thousands of archived stories on important energy developments dating back to 2006, an unmatched resource for researchers
— Get insight into complex and interconnected regulatory, policy, environmental and business strategy issues
— Learn about emerging trends for first-mover advantage
— Get a two-page renewable energy supplement each Monday that spotlights corporate and state policy initiatives as well as federal regulatory developments

How We Help
For 40+ years, The Energy Daily has provided a four-page, quick-read on U.S. energy policy, regulatory and business trends, with a focus on the electricity and nuclear sectors. Our team of veteran reporters and analysts have decades of combined experience in the energy business, earning the publication an enduring reputation for accuracy, clarity and foresight.
