

Midday Update

Know the latest trades, bids and offers in the olefins, NGLs, polymers and upstream markets

The Midday Update provides accurate calculations of NGL-based cash costs for ethylene producers

WHO WE HELP

NGL & Petrochemical Companies

Polymer Manufacturers

Refiners

Traders

Financial Institutions

COMMODITY

Ethylene

Propylene

NGLs

Aromatics

Polymers

Refined Products

MARKET SEGMENT

Spot

Market Challenge

Petrochemical trading has become an around-the-clock operation, with spot prices and forward markets evolving throughout the day. In the olefins markets, traders must evaluate production economics, downstream demand and plant operations as they make hourly decisions until markets close.

How We Help

In a summary of news briefs, the Midday Update captures the latest trades and fresh markets for olefins, NGLs, plastics and refined products. The report also delivers key ratios of ethylene and propylene prices against crude oil, ethane and propane, and ethylene cash-cost forward curves.

Benefits

- See ethylene cash cost calculations for ethane, propane, butane and natural gasoline to get an inside view of olefins production economics
- Gain future production economics and hedging opportunities with forward curves for spot ethylene and ethylene cash costs
- Monitor the alternative fuel value of propylene with implied alkylate value and spot prices for alkylate, as well as other blendstocks
