

Propylene Weekly

Understand price movements in the complex PGP and RGP supply chains

Propylene Weekly offers a comprehensive summary of spot price trends, downstream demand, global exports and important industry news.

WHO WE HELP

Petrochemical Companies

Plastics Converters

Distributors

Traders

Consumer Product Manufacturers & Retailers

Durable Products Manufacturers

Financial Institutions

COMMODITIES

Polymer Grade Propylene (PGP)

Refinery Grade Propylene (RGP)

Polypropylene

Ethylene

Propane

Naphtha

Market Challenge

Less than 10 years ago, spot trades for propylene were infrequent and difficult to confirm, revolving around a single monthly contract price. The propylene market is not easy to understand, as its varied raw materials link to both refining and petrochemical economics and trends, with a vast number of downstream applications. The number of market players is limited, and so misinformation (or misunderstood information) is a problem.

How We Help

In a weekly six-page report containing charts and price summary tables, Propylene Weekly focuses on the spot polymer grade propylene and refinery grade propylene markets, including production costs, international trade data and forward curves.

Features

- Three-year PGP forward curves
- Trading volumes for physical, financial, spread and index deals
- U.S. plant operations news and rates for steam crackers, refineries, PDH units and splitters
- U.S. PGP margins based on RGP, propane and ethylene
- European and Asian ethylene spot prices, market insights and operations news
- Global feedstock indicators (propane and naphtha)
- Freight rates and export fixtures
- Downstream market snapshots (PP, Cumene, Alkylate)
