

Real-time pricing in the APAC market for petrochemical feedstocks is essential for strategic decision-making.

Petrochemical producers in the Asia-Pacific region can choose among a variety of feedstocks, such as naphtha and propane. Spot price volatility in the trading market can increase the cost of one commodity above the other in just a few short months. An example:

IF aware of this price shift...

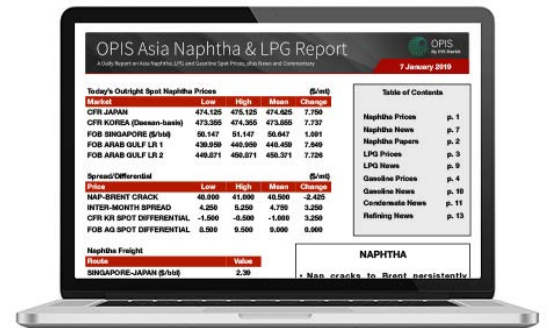

Petrochemical producers can adjust raw material purchases to maximize profitability

Sellers & traders can re-direct product to a different market or limit losses as prices fall

Real-time naphtha and LPG prices at APAC hubs allow fast action and inform short-term position plays.

OPIS Asia Naphtha & LPG Report provides spot pricing for the connected markets of naphtha, LPG, gasoline and condensate. In a single daily report, you get a clear explanation of benchmark price assessments. News reports on refinery disturbances, tender and shipping allow faster reaction to market changes.

Request a FREE 3-week trial and track APAC market moves.
